Press Release

ACUSTRIP Brake Fluid Test #61000

July 1, 2015

ACUSTRIP Company, Inc. leading Fluid Diagnostics since 1989, continues to develop new innovations for Vehicle Fluid Diagnostics. ACUSTRIP Fluid Diagnostic® products have been proven effective with Automotive Service Providers, DIYers and OEMs worldwide. Customers praise the ACUSTRIP products for their reliability and ease of use. A leading OEM Brake Fluid supplier is recently quoted as saying that “the test strip - is easy to use and provides reliable results”

According to MAP, industry research shows most drivers do not know enough about proper brake system care. Service providers using the patented Brake fluid test #61000 can show customers “on the spot”® the condition of their brake fluid, often identifying needed brake fluid service that may otherwise have not been spotted. Service providers can show the customer the fluid condition, so they both can see when it is time for a service.

Tracked overtime the one simple *dip and read test* measures the protection level of the Brake Fluid.

ACUSTRIP® #61000 is now available in convenient to use dispensers of 100 tests that protects the tests strips until they are used.

For Release July 2015
