PRESS RELEASE

ACUSTRIP Company, Inc.
Sept 1, 2020
For Immediate Release

ACUSTRIP® & HD GROUP® Have teamed up to offer a custom branded automotive Inspection kit.

Acustrip who has been the leader in diagnostic test strips since 1989, is now offering the Vehicle Inspection Kit (VIK)[™] in a private branded version produced by HD GROUP. For more than 12 years HD GROUP has been and still is the industry supplier for this type of kit. Acustrip and HD Group have teamed up and created a kit for Acustrip to offer to their customers.

For years HD GROUP has updated and improved its vehicle fluid diagnostics kits that include test strips for each type of automotive fluid. These test strips utilized as part of the copyrighted inspection process, show the actual condition of all fluids including brake, power steering, transmission, gear lube, motor oil and antifreeze coolant. The newest kit is also designed to be photographed and uploaded as a permanent digital inspection record.

Automotive repair shops have limited methods when it comes to servicing fluids. The options were time/mileage, color/odor or referring to the vehicle's owner manual. These vehicle fluid test kits help shop owners recommend services based on the actual conditions.

The vehicle fluid diagnostics kits (part #30000-PERF-ACU) now offered by Acustrip makes it easy to identify current conditions of the customer's fluids. These test kits provide customers with the results and a record to cover the benefits of performing needed fluid services.

All lubricants contain additives that inhibit breakdown. As these additives become depleted, the fluid degrades and is no longer able to perform its intended function. These kits are a tool that provides a measure of additive depletion, the level of sludge and/or the amount of wear metals in the fluid. When using patented technology, the consumer instantly sees what service personnel see. There is no guesswork, and the results are verified within 120 seconds of testing.
